

# Welcome to Kuala Lumpur!

Welcome to FUDCon Kuala Lumpur!

I'm more than excited to know that you could answer your real interest to Fedora by attending this conference. I'll be looking forward to witnessing an awesome experience of yours.

Starting from about few previous months, Fedora community members have been working at their best to help plan this conference. The existence of this book is one of its evidences. They made this guide book special for you to gain maximal achievement in FUDCon. Please have your time to read this document thoroughly as some information like the location and time of the session is contained in it.

I'd also like to express my gratitude especially to University College of Technology and Innovation (UCTI) in Asia Pacific Institute of Information and Technology because of their help, support, and generosity. It is impossible for us to make this event came true if there was no contribution from them.

There are few more matters to be highlighted:

1. For all participants, please do come on time according to the schedule written inside here. I know that some of us are not early risers, but we are confirming this to you in order to make this event flows as organized.
2. Take note that our conference will be held in several places all over UCTI. Regarding to this, always refer to the map given in this guide book so earlier plan can be defined.
3. Be safe. We don't want anything bad happens to any of our participants. Just in case if you are in such emergency situation, you may refer to page 6 for all listed emergency numbers.
4. While we're happy to know that you are attending this conference, some of Fedora contributors are not with us. Therefore, always share your experience here through IRC channels, blogging or micro-blogging as we are looking to meet more people. This is done to maintain our strength and trust of Fedora in the community.

Last but not least, I would like to wish you happiness so as hope that you will be having a great time in FUDCon Kuala Lumpur. If you have any queries, please don't hesitate to ask us.

Thank you and best regards,

Robyn Bergeron  
Fedora Project Leader
