## A Free Operating System For A Free Community

**What Is Fedora?**

Fedora is an operating system and a development platform based on Linux that is free to use, free to modify, free and legal to redistribute, and free from potentially damaging software patent encumbrances.

Fedora is built from the latest technologies from the free software world, and developed by a community of users and developers who are passionate about providing and maintaining the best free software distribution in the world.

The latest official release to date is Fedora 9, codenamed "Sulphur"

**What Is the Fedora Project?**

The Fedora Project is a Red Hat sponsored and community supported open source project. Our goal is the rapid progress of free and open source software and content. The Fedora Project makes use of public forums, open processes, rapid innovation, meritocracy, and transparency in pursuit of the best operating system and platform that free software can provide.

## Fedora 9

Fedora 8 comes on a DVD or a single live CD. Packages are selected to cater to a broad spectrum of use, from home and business use, to system administration and software development.  No matter who you are, Fedora can provide you with the best free software to meet your needs.

## The Desktop

The default Fedora desktop uses the GNOME 2.22 desktop environment. It is easy to use, simple and suitable for everybody.  You are free to change the themes, or even to replace it with a different desktop environment altogether.

For the eye-candy lovers, Fedora 9 includes Compiz Fusion, a 3D desktop, in its default installation.

If GNOME is not your desktop of choice, KDE 4.0 is available.

## OpenOffice 2.4

OpenOffice.org is a multi-platform and multilingual open source office suite. It has everything you need for productivity in your business, studies and everyday tasks.

- OpenOffice Writer (Word processor)

- OpenOffice Calc (Spreadsheet application)

- OpenOffice Impress (Slide show designer)

## Network Manager

NetworkManager 0.7 provides improved wireless network management support. It includes support for multiple devices and provides the capability of system-wide configuration, among many other enhancements to make your networking experience easier. It also support most 3g datacard in Malaysia.

## Pulse Audio

Pulse Audio is installed and enabled by default. Pulse Audio is an advanced sound server compatible with nearly all existing Linux sound systems. Pulse Audio allows for hot-switching audio outputs, individual volume controls for each audio stream, networked audio, and more.
